

Picture Matching Application

Petros Valacheas

December 2018

Contents

1 Introduction

2 Usage of Application

1.Introduction

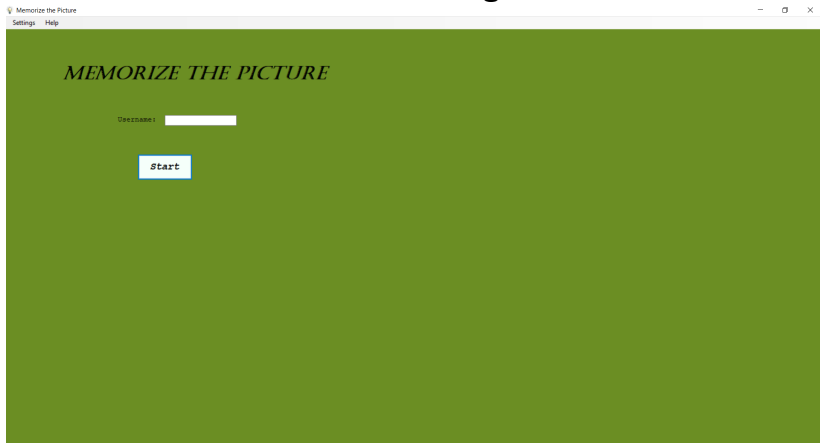

- This was implemented using C# with **Web Forms**, and **Visual Studio**.
- The user should find the pictures that match each other. Firstly, all pictures are randomly placed upside down in a canvas 5X4. The user selects and reveals an image. If the image which was reversed matches with the image of the first selection then the pair is removed. If it does not match, both images are set upside down. There are also timers that count both time and attempts that the player makes.

4.Usage of **Application**

- To Play the Game choose 10 images in Settings->choose menu , give your name and press the Start button .
